

Abstract of the Disclosure

This invention relates to methods for use in industrial production of proteins. Specifically, the present invention provides a method of recycling solid supports for cultivation of anchorage-dependent cells such as, e.g., microcarriers and Fibra-Cell® disks. Solid supports recycled by a method of the present invention allow obtaining a protein productivity level comparable to the productivity level obtained with non-recycled solid support. The method comprises the steps of rinsing with water, rinsing with a sodium hydroxide solution and second rinsing step with water.
